

TechStore Plus Customer Policies

Returns, refunds, warranty support, damaged delivery, and customer remedies

Original synthetic documentation for the TechStore Plus RAG project. Use these pages to test PDF ingestion, chunking, metadata, retrieval, and grounded customer-support answers.

1.1 Return Eligibility and Product Condition: Customer Evidence

For customer-facing support and policy teams, this section defines how TechStore Plus handles customer expectations when a engineering student contacts support about a Wi-Fi 6 router and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles agent next action when a small business owner contacts support about a 4K monitor and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles escalation trigger when a competitive gamer contacts support about a USB-C docking station and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles exception handling when a family account manager contacts support about a noise-canceling headset and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
gaming notebook: router disconnects during video calls	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:1:1
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:1:2
tablet: customer cannot locate package	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:1:3
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:1:4

1.2 Return Eligibility and Product Condition: Agent Workflow

For customer-facing support and policy teams, this section defines how TechStore Plus handles agent next action when a small business owner contacts support about a 4K monitor and reports customer cannot locate package. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles escalation trigger when a family account manager contacts support about a USB-C docking station and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles exception handling when a content creator contacts support about a noise-canceling headset and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles source metadata when a remote consultant contacts support about a mechanical keyboard and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:2:1
tablet: customer cannot locate package	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:2:2
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:2:3
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:2:4

1.3 Return Eligibility and Product Condition: Edge Case

For customer-facing support and policy teams, this section defines how TechStore Plus handles escalation trigger when a competitive gamer contacts support about a USB-C docking station and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 3-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles exception handling when a content creator contacts support about a noise-canceling headset and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 3-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles source metadata when an engineering student contacts support about a mechanical keyboard and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles quality audit note when a family account manager contacts support about a smart home hub and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
tablet: customer cannot locate package	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:3:1
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:3:2
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:3:3
4K monitor: payment authorization failed	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:3:4

1.4 Return Eligibility and Product Condition: Escalation Rule

For customer-facing support and policy teams, this section defines how TechStore Plus handles exception handling when a family account manager contacts support about a noise-canceling headset and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 4-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles source metadata when a remote consultant contacts support about a mechanical keyboard and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 4-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles quality audit note when a family account manager contacts support about a smart home hub and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles eligibility when a remote consultant contacts support about a ultrabook laptop and reports router disconnects during video calls. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:4:1
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:4:2
4K monitor: payment authorization failed	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:4:3
USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:4:4

1.5 Return Eligibility and Product Condition: Quality Check

For customer-facing support and policy teams, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a mechanical keyboard and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles quality audit note when a small business owner contacts support about a smart home hub and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles eligibility when a field technician contacts support about a ultrabook laptop and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles documentation when a family account manager contacts support about a engineering workstation laptop and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:5:1
4K monitor: payment authorization failed	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:5:2
USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:5:3
noise-canceling headset: customer needs a replacement before travel	Verify order, collect evidence, route via return workflow	01_techstore_customer_policies:5:4

2.1 Refund Timelines and Payment Exceptions: Baseline Standard

For customer-facing support and policy teams, this section defines how TechStore Plus handles customer expectations when a engineering student contacts support about a mesh router and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles agent next action when a small business owner contacts support about a Wi-Fi 6 router and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles escalation trigger when a competitive gamer contacts support about a 4K monitor and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles exception handling when a family account manager contacts support about a USB-C docking station and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

3.2 Warranty Coverage and Service Contracts: Customer Evidence

For customer-facing support and policy teams, this section defines how TechStore Plus handles agent next action when a small business owner contacts support about a Wi-Fi 6 router and reports customer cannot locate package. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles escalation trigger when a family account manager contacts support about a 4K monitor and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles exception handling when a content creator contacts support about a USB-C docking station and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles source metadata when a remote consultant contacts support about a noise-canceling headset and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via warranty workflow	01_techstore_customer_policies:2:1

Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via warranty workflow	01_techstore_customer_policies:2:4

3.3 Warranty Coverage and Service Contracts: Agent Workflow

For customer-facing support and policy teams, this section defines how TechStore Plus handles escalation trigger when a competitive gamer contacts support about a 4K monitor and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles exception handling when a content creator contacts support about a USB-C docking station and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles source metadata when an engineering student contacts support about a noise-canceling headset and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles quality audit note when a family account manager contacts support about a mechanical keyboard and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
tablet: customer cannot locate package	Verify order, collect evidence, route via warranty workflow	01_techstore_customer_policies:3:1

4K monitor: payment authorization failed	Verify order, collect evidence, route via warranty workflow	01_techstore_customer_policies:3:4

3.4 Warranty Coverage and Service Contracts: Edge Case

For customer-facing support and policy teams, this section defines how TechStore Plus handles exception handling when a family account manager contacts support about a USB-C docking station and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles source metadata when a remote consultant contacts support about a noise-canceling headset and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles quality audit note when a family account manager contacts support about a mechanical keyboard and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles eligibility when a remote consultant contacts support about a smart home hub and reports router disconnects during video calls. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via warranty workflow	01_techstore_customer_policies:4:1

USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via warranty workflow	01_techstore_customer_policies:4:4

3.5 Warranty Coverage and Service Contracts: Escalation Rule

For customer-facing support and policy teams, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a noise-canceling headset and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 5-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles quality audit note when a small business owner contacts support about a mechanical keyboard and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles eligibility when a field technician contacts support about a smart home hub and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles documentation when a family account manager contacts support about a ultrabook laptop and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via warranty workflow	01_techstore_customer_policies:5:1

USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via warranty workflow	01_techstore_customer_policies:5:3
noise-canceling headset: customer needs a replacement before travel	Verify order, collect evidence, route via warranty workflow	01_techstore_customer_policies:5:4

4.1 Damaged Delivery and Missing Package Claims: Escalation Rule

For customer-facing support and policy teams, this section defines how TechStore Plus handles customer expectations when a engineering student contacts support about a noise-canceling headset and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles agent next action when a small business owner contacts support about a mechanical keyboard and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles escalation trigger when a competitive gamer contacts support about a smart home hub and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles exception handling when a family account manager contacts support about a ultrabook laptop and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

4.2 Damaged Delivery and Missing Package Claims: Quality Check

For customer-facing support and policy teams, this section defines how TechStore Plus handles agent next action when a small business owner contacts support about a mechanical keyboard and reports customer cannot locate package. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 2-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles escalation trigger when a family account manager contacts support about a smart home hub and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 2-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles exception handling when a content creator contacts support about a ultrabook laptop and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 2-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles source metadata when a remote consultant contacts support about a engineering workstation laptop and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 2-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

tablet: customer cannot locate package	Verify order, collect evidence, route via policy workflow	01_techstore_customer_policies:3:1
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via policy workflow	01_techstore_customer_policies:3:2
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via policy workflow	01_techstore_customer_policies:3:3
4K monitor: payment authorization failed	Verify order, collect evidence, route via policy workflow	01_techstore_customer_policies:3:4

5.4 Policy Exceptions for Business-Critical Orders: Agent Workflow

For customer-facing support and policy teams, this section defines how TechStore Plus handles exception handling when a family account manager contacts support about a smartphone and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles source metadata when a remote consultant contacts support about a tablet and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles quality audit note when a family account manager contacts support about a mesh router and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles eligibility when a remote consultant contacts support about a Wi-Fi 6 router and reports router disconnects during video calls. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

4K monitor: payment authorization failed	Verify order, collect evidence, route via policy workflow	01_techstore_customer_policies:4:3
USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via policy workflow	01_techstore_customer_policies:4:4

5.5 Policy Exceptions for Business-Critical Orders: Edge Case

For customer-facing support and policy teams, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a tablet and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles quality audit note when a small business owner contacts support about a mesh router and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles eligibility when a field technician contacts support about a Wi-Fi 6 router and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles documentation when a family account manager contacts support about a 4K monitor and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

noise-canceling headset: customer needs a replacement before travel	Verify order, collect evidence, route via policy workflow	01_techstore_customer_policies:5:4

6.1 Customer Communication Templates: Customer Evidence

For customer-facing support and policy teams, this section defines how TechStore Plus handles customer expectations when a engineering student contacts support about a mechanical keyboard and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles agent next action when a small business owner contacts support about a smart home hub and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles escalation trigger when a competitive gamer contacts support about a ultrabook laptop and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer-facing support and policy teams, this section defines how TechStore Plus handles exception handling when a family account manager contacts support about a engineering workstation laptop and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via customer workflow	01_techstore_customer_policies:5:1
4K monitor: payment authorization failed	Verify order, collect evidence, route via customer workflow	01_techstore_customer_policies:5:2
USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via customer workflow	01_techstore_customer_policies:5:3
noise-canceling headset: customer needs a replacement before travel	Verify order, collect evidence, route via customer workflow	01_techstore_customer_policies:5:4

Appendix 31: Return Eligibility and Product Condition Scenario Library

Case study: A family account manager purchased a 4K monitor and contacted TechStore Plus because customer cannot locate package. The agent first verified the order context, then separated what was known from what still needed evidence. The response avoided broad promises and explained the next checkpoint in plain language. This pattern supports retrieval because the case contains product, issue, evidence, and next-action signals in one passage.

Decision note for Return Eligibility and Product Condition: agents should choose the narrowest reliable answer. When a document does not contain a final remedy, the correct answer is to state the known policy boundary and request the missing evidence. This is especially important for warranty exclusions, delivery disputes, account recovery, and payment-risk cases.

Agent guidance: acknowledge the customer concern, name the relevant TechStore process, ask for the order number or serial number when needed, and summarize the next action. Do not invent coverage, shipping dates, repair outcomes, discounts, or security status. Use retrieved context as the source of truth and cite the source title when available.

Quality note: a strong answer for this topic is concise, specific, and verifiable. It should contain the policy window, customer evidence, product category, ownership team, and escalation threshold when those details are present. A weak answer repeats generic reassurance without connecting the customer request to a documented rule.
