

TechStore Plus Product Catalog Guide

Buying guidance for laptops, smartphones, tablets, routers, monitors, and accessories

Original synthetic documentation for the TechStore Plus RAG project. Use these pages to test PDF ingestion, chunking, metadata, retrieval, and grounded customer-support answers.

1.1 Laptop Families and Buyer Profiles: Edge Case

For sales support and product inquiry agents, this section defines how TechStore Plus handles customer expectations when a hybrid office employee contacts support about a ultrabook laptop and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles agent next action when a content creator contacts support about a engineering workstation laptop and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles escalation trigger when a field technician contacts support about a gaming notebook and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles exception handling when a remote consultant contacts support about a smartphone and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
gaming notebook: router disconnects during video calls	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:1:1
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:1:2
tablet: customer cannot locate package	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:1:3
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:1:4

1.2 Laptop Families and Buyer Profiles: Escalation Rule

For sales support and product inquiry agents, this section defines how TechStore Plus handles agent next action when a content creator contacts support about a engineering workstation laptop and reports customer cannot locate package. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 2-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a gaming notebook and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles exception handling when a small business owner contacts support about a smartphone and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles source metadata when a family account manager contacts support about a tablet and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:2:1
tablet: customer cannot locate package	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:2:2
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:2:3
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:2:4

1.3 Laptop Families and Buyer Profiles: Quality Check

For sales support and product inquiry agents, this section defines how TechStore Plus handles escalation trigger when a field technician contacts support about a gaming notebook and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles exception handling when a small business owner contacts support about a smartphone and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a tablet and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles quality audit note when a remote consultant contacts support about a mesh router and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

tablet: customer cannot locate package	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:3:1
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:3:2
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:3:3
4K monitor: payment authorization failed	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:3:4

1.4 Laptop Families and Buyer Profiles: Example Dialogue

For sales support and product inquiry agents, this section defines how TechStore Plus handles exception handling when a remote consultant contacts support about a smartphone and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles source metadata when a family account manager contacts support about a tablet and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles quality audit note when a remote consultant contacts support about a mesh router and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles eligibility when a family account manager contacts support about a Wi-Fi 6 router and reports router disconnects during video calls. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:4:1
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:4:2
4K monitor: payment authorization failed	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:4:3
USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via laptop workflow	02_techstore_product_catalog_guide:4:4

1.5 Laptop Families and Buyer Profiles: Operational Metric

For sales support and product inquiry agents, this section defines how TechStore Plus handles source metadata when a engineering student contacts support about a tablet and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles quality audit note when a content creator contacts support about a mesh router and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles eligibility when a competitive gamer contacts support about a Wi-Fi 6 router and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles documentation when a remote consultant contacts support about a 4K monitor and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

3.3 Home Office Bundles and Peripherals: Example Dialogue

For sales support and product inquiry agents, this section defines how TechStore Plus handles escalation trigger when a field technician contacts support about a smartphone and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles exception handling when a small business owner contacts support about a tablet and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a mesh router and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles quality audit note when a remote consultant contacts support about a Wi-Fi 6 router and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

3.5 Home Office Bundles and Peripherals: Baseline Standard

For sales support and product inquiry agents, this section defines how TechStore Plus handles source metadata when a engineering student contacts support about a mesh router and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles quality audit note when a content creator contacts support about a Wi-Fi 6 router and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles eligibility when a competitive gamer contacts support about a 4K monitor and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles documentation when a remote consultant contacts support about a USB-C docking station and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

4.1 Gaming Systems and Display Recommendations: Edge Case

For sales support and product inquiry agents, this section defines how TechStore Plus handles customer expectations when a hybrid office employee contacts support about a USB-C docking station and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles agent next action when a content creator contacts support about a noise-canceling headset and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles escalation trigger when a field technician contacts support about a mechanical keyboard and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles exception handling when a remote consultant contacts support about a smart home hub and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

tablet: customer cannot locate package	Verify order, collect evidence, route via router, workflow	02_techstore_product_catalog_guide:3:1
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via router, workflow	02_techstore_product_catalog_guide:3:2
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via router, workflow	02_techstore_product_catalog_guide:3:3
4K monitor: payment authorization failed	Verify order, collect evidence, route via router, workflow	02_techstore_product_catalog_guide:3:4

5.4 Router, Mesh, and Smart Home Recommendations: Baseline Standard

For sales support and product inquiry agents, this section defines how TechStore Plus handles exception handling when a remote consultant contacts support about a engineering workstation laptop and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles source metadata when a family account manager contacts support about a gaming notebook and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles quality audit note when a remote consultant contacts support about a smartphone and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles eligibility when a family account manager contacts support about a tablet and reports router disconnects during video calls. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via router, workflow	02_techstore_product_catalog_guide:4:4

5.5 Router, Mesh, and Smart Home Recommendations: Customer Evidence

For sales support and product inquiry agents, this section defines how TechStore Plus handles source metadata when a engineering student contacts support about a gaming notebook and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles quality audit note when a content creator contacts support about a smartphone and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles eligibility when a competitive gamer contacts support about a tablet and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles documentation when a remote consultant contacts support about a mesh router and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via router, workflow	02_techstore_product_catalog_guide:5:3
noise-canceling headset: customer needs a replacement before travel	Verify order, collect evidence, route via router, workflow	02_techstore_product_catalog_guide:5:4

6.1 Accessory Matching and Upgrade Paths: Quality Check

For sales support and product inquiry agents, this section defines how TechStore Plus handles customer expectations when a hybrid office employee contacts support about a gaming notebook and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles agent next action when a content creator contacts support about a smartphone and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles escalation trigger when a field technician contacts support about a tablet and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles exception handling when a remote consultant contacts support about a mesh router and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

tablet: customer cannot locate package	Verify order, collect evidence, route via accessory workflow	02_techstore_product_catalog_guide:1:3
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via accessory workflow	02_techstore_product_catalog_guide:1:4

6.2 Accessory Matching and Upgrade Paths: Example Dialogue

For sales support and product inquiry agents, this section defines how TechStore Plus handles agent next action when a content creator contacts support about a smartphone and reports customer cannot locate package. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a tablet and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles exception handling when a small business owner contacts support about a mesh router and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles source metadata when a family account manager contacts support about a Wi-Fi 6 router and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

mesh router: order shows delivered but is missing	Verify order, collect evidence, route via accessory workflow	02_techstore_product_catalog_guide:2:3
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via accessory workflow	02_techstore_product_catalog_guide:2:4

6.3 Accessory Matching and Upgrade Paths: Operational Metric

For sales support and product inquiry agents, this section defines how TechStore Plus handles escalation trigger when a field technician contacts support about a tablet and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles exception handling when a small business owner contacts support about a mesh router and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a Wi-Fi 6 router and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For sales support and product inquiry agents, this section defines how TechStore Plus handles quality audit note when a remote consultant contacts support about a 4K monitor and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

4K monitor: payment authorization failed	Verify order, collect evidence, route via accessory workflow	02_techstore_product_catalog_guide:5:2
USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via accessory workflow	02_techstore_product_catalog_guide:5:3
noise-canceling headset: customer needs a replacement before travel	Verify order, collect evidence, route via accessory workflow	02_techstore_product_catalog_guide:5:4

Appendix 31: Laptop Families and Buyer Profiles Scenario Library

Case study: A family account manager purchased a 4K monitor and contacted TechStore Plus because customer cannot locate package. The agent first verified the order context, then separated what was known from what still needed evidence. The response avoided broad promises and explained the next checkpoint in plain language. This pattern supports retrieval because the case contains product, issue, evidence, and next-action signals in one passage.

Decision note for Laptop Families and Buyer Profiles: agents should choose the narrowest reliable answer. When a document does not contain a final remedy, the correct answer is to state the known policy boundary and request the missing evidence. This is especially important for warranty exclusions, delivery disputes, account recovery, and payment-risk cases.

Agent guidance: acknowledge the customer concern, name the relevant TechStore process, ask for the order number or serial number when needed, and summarize the next action. Do not invent coverage, shipping dates, repair outcomes, discounts, or security status. Use retrieved context as the source of truth and cite the source title when available.

Quality note: a strong answer for this topic is concise, specific, and verifiable. It should contain the policy window, customer evidence, product category, ownership team, and escalation threshold when those details are present. A weak answer repeats generic reassurance without connecting the customer request to a documented rule.
