

TechStore Plus Agent Handbook

Conversation standards, routing, urgency, follow-up, and support quality

Original synthetic documentation for the TechStore Plus RAG project. Use these pages to test PDF ingestion, chunking, metadata, retrieval, and grounded customer-support answers.

1.1 Conversation Flow and Customer Tone: Escalation Rule

For customer service agents and team leads, this section defines how TechStore Plus handles customer expectations when a content creator contacts support about a engineering workstation laptop and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a gaming notebook and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a smartphone and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a tablet and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
gaming notebook: router disconnects during video calls	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:1:1
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:1:2
tablet: customer cannot locate package	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:1:3
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:1:4

1.2 Conversation Flow and Customer Tone: Quality Check

For customer service agents and team leads, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a gaming notebook and reports customer cannot locate package. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles escalation trigger when an engineering student contacts support about a smartphone and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a competitive gamer contacts support about a tablet and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a mesh router and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:2:1
tablet: customer cannot locate package	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:2:2
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:2:3
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:2:4

1.3 Conversation Flow and Customer Tone: Example Dialogue

For customer service agents and team leads, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a smartphone and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a competitive gamer contacts support about a tablet and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a content creator contacts support about a mesh router and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles quality audit note when an engineering student contacts support about a Wi-Fi 6 router and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
tablet: customer cannot locate package	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:3:1
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:3:2
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:3:3
4K monitor: payment authorization failed	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:3:4

1.4 Conversation Flow and Customer Tone: Operational Metric

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a tablet and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a mesh router and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles quality audit note when a engineering student contacts support about a Wi-Fi 6 router and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles eligibility when a hybrid office employee contacts support about a 4K monitor and reports router disconnects during video calls. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:4:1
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:4:2
4K monitor: payment authorization failed	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:4:3
USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:4:4

1.5 Conversation Flow and Customer Tone: Baseline Standard

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a small business owner contacts support about a mesh router and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles quality audit note when a field technician contacts support about a Wi-Fi 6 router and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles eligibility when a family account manager contacts support about a 4K monitor and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles documentation when a engineering student contacts support about a USB-C docking station and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:5:1
4K monitor: payment authorization failed	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:5:2
USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:5:3
noise-canceling headset: customer needs a replacement before travel	Verify order, collect evidence, route via conversation workflow	05_techstore_agent_handbook:5:4

2.1 Intent Classification and Routing: Agent Workflow

For customer service agents and team leads, this section defines how TechStore Plus handles customer expectations when a content creator contacts support about a smart home hub and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a ultrabook laptop and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a engineering workstation laptop and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a gaming notebook and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
gaming notebook: router disconnects during video calls	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:1:1
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:1:2
tablet: customer cannot locate package	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:1:3
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:1:4

2.2 Intent Classification and Routing: Edge Case

For customer service agents and team leads, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a ultrabook laptop and reports customer cannot locate package. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles escalation trigger when a engineering student contacts support about a engineering workstation laptop and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a competitive gamer contacts support about a gaming notebook and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a smartphone and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:2:1
tablet: customer cannot locate package	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:2:2
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:2:3
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:2:4

2.3 Intent Classification and Routing: Escalation Rule

For customer service agents and team leads, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a engineering workstation laptop and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a competitive gamer contacts support about a gaming notebook and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a content creator contacts support about a smartphone and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles quality audit note when a engineering student contacts support about a tablet and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
tablet: customer cannot locate package	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:3:1
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:3:2
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:3:3
4K monitor: payment authorization failed	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:3:4

2.4 Intent Classification and Routing: Quality Check

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a gaming notebook and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a smartphone and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles quality audit note when a engineering student contacts support about a tablet and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles eligibility when a hybrid office employee contacts support about a mesh router and reports router disconnects during video calls. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:4:1
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:4:2

USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:4:4

2.5 Intent Classification and Routing: Example Dialogue

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a small business owner contacts support about a smartphone and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles quality audit note when a field technician contacts support about a tablet and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles eligibility when a family account manager contacts support about a mesh router and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles documentation when a engineering student contacts support about a Wi-Fi 6 router and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:5:1
4K monitor: payment authorization failed	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:5:2
USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:5:3
noise-canceling headset: customer needs a replacement before travel	Verify order, collect evidence, route via intent workflow	05_techstore_agent_handbook:5:4

3.1 Urgency, Priority Support, and Escalation: Agent Workflow

For customer service agents and team leads, this section defines how TechStore Plus handles customer expectations when a content creator contacts support about a 4K monitor and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a USB-C docking station and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a noise-canceling headset and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a mechanical keyboard and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
gaming notebook: router disconnects during video calls	Verify order, collect evidence, route via urgency, workflow	05_techstore_agent_handbook:1:1
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via urgency, workflow	05_techstore_agent_handbook:1:2
tablet: customer cannot locate package	Verify order, collect evidence, route via urgency, workflow	05_techstore_agent_handbook:1:3
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via urgency, workflow	05_techstore_agent_handbook:1:4

3.2 Urgency, Priority Support, and Escalation: Edge Case

For customer service agents and team leads, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a USB-C docking station and reports customer cannot locate package. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles escalation trigger when a engineering student contacts support about a noise-canceling headset and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a competitive gamer contacts support about a mechanical keyboard and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a smart home hub and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via urgency, workflow	05_techstore_agent_handbook:2:1

Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via urgency, workflow	05_techstore_agent_handbook:2:4

3.3 Urgency, Priority Support, and Escalation: Escalation Rule

For customer service agents and team leads, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a noise-canceling headset and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a competitive gamer contacts support about a mechanical keyboard and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a content creator contacts support about a smart home hub and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles quality audit note when an engineering student contacts support about a ultrabook laptop and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

4K monitor: payment authorization failed	Verify order, collect evidence, route via urgency, workflow	05_techstore_agent_handbook:3:4

3.4 Urgency, Priority Support, and Escalation: Quality Check

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a mechanical keyboard and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a smart home hub and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles quality audit note when a engineering student contacts support about a ultrabook laptop and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles eligibility when a hybrid office employee contacts support about a engineering workstation laptop and reports router disconnects during video calls. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via urgency, workflow	05_techstore_agent_handbook:4:4

3.5 Urgency, Priority Support, and Escalation: Example Dialogue

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a small business owner contacts support about a smart home hub and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles quality audit note when a field technician contacts support about a ultrabook laptop and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles eligibility when a family account manager contacts support about a engineering workstation laptop and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles documentation when a engineering student contacts support about a gaming notebook and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

noise-canceling headset: customer needs a replacement before travel	Verify order, collect evidence, route via urgency, workflow	05_techstore_agent_handbook:5:4

4.1 Follow-Up Tasks and Ownership: Example Dialogue

For customer service agents and team leads, this section defines how TechStore Plus handles customer expectations when a content creator contacts support about a 4K monitor and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a USB-C docking station and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a noise-canceling headset and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a mechanical keyboard and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

4K monitor: payment authorization failed	Verify order, collect evidence, route via grounded workflow	05_techstore_agent_handbook:3:4

5.4 Grounded Answers and Knowledge Base Use: Edge Case

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a USB-C docking station and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a noise-canceling headset and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles quality audit note when a engineering student contacts support about a mechanical keyboard and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles eligibility when a hybrid office employee contacts support about a smart home hub and reports router disconnects during video calls. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via grounded workflow	05_techstore_agent_handbook:4:4

5.5 Grounded Answers and Knowledge Base Use: Escalation Rule

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a small business owner contacts support about a noise-canceling headset and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 5-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles quality audit note when a field technician contacts support about a mechanical keyboard and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles eligibility when a family account manager contacts support about a smart home hub and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles documentation when a engineering student contacts support about a ultrabook laptop and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 5-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via grounded workflow	05_techstore_agent_handbook:5:1
4K monitor: payment authorization failed	Verify order, collect evidence, route via grounded workflow	05_techstore_agent_handbook:5:2
USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via grounded workflow	05_techstore_agent_handbook:5:3
noise-canceling headset: customer needs a replacement before travel	Verify order, collect evidence, route via grounded workflow	05_techstore_agent_handbook:5:4

6.1 Quality Review, Coaching, and Examples: Operational Metric

For customer service agents and team leads, this section defines how TechStore Plus handles customer expectations when a content creator contacts support about a tablet and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a mesh router and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a Wi-Fi 6 router and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a 4K monitor and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
gaming notebook: router disconnects during video calls	Verify order, collect evidence, route via quality workflow	05_techstore_agent_handbook:1:1
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via quality workflow	05_techstore_agent_handbook:1:2
tablet: customer cannot locate package	Verify order, collect evidence, route via quality workflow	05_techstore_agent_handbook:1:3
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via quality workflow	05_techstore_agent_handbook:1:4

6.2 Quality Review, Coaching, and Examples: Baseline Standard

For customer service agents and team leads, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a mesh router and reports customer cannot locate package. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles escalation trigger when an engineering student contacts support about a Wi-Fi 6 router and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles exception handling when a competitive gamer contacts support about a 4K monitor and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For customer service agents and team leads, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a USB-C docking station and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via quality workflow	05_techstore_agent_handbook:5:3
noise-canceling headset: customer needs a replacement before travel	Verify order, collect evidence, route via quality workflow	05_techstore_agent_handbook:5:4

Appendix 31: Conversation Flow and Customer Tone Scenario Library

Case study: A family account manager purchased a 4K monitor and contacted TechStore Plus because customer cannot locate package. The agent first verified the order context, then separated what was known from what still needed evidence. The response avoided broad promises and explained the next checkpoint in plain language. This pattern supports retrieval because the case contains product, issue, evidence, and next-action signals in one passage.

Decision note for Conversation Flow and Customer Tone: agents should choose the narrowest reliable answer. When a document does not contain a final remedy, the correct answer is to state the known policy boundary and request the missing evidence. This is especially important for warranty exclusions, delivery disputes, account recovery, and payment-risk cases.

Agent guidance: acknowledge the customer concern, name the relevant TechStore process, ask for the order number or serial number when needed, and summarize the next action. Do not invent coverage, shipping dates, repair outcomes, discounts, or security status. Use retrieved context as the source of truth and cite the source title when available.

Quality note: a strong answer for this topic is concise, specific, and verifiable. It should contain the policy window, customer evidence, product category, ownership team, and escalation threshold when those details are present. A weak answer repeats generic reassurance without connecting the customer request to a documented rule.
