

TechStore Plus Account Security Guide

Secure account access, fraud signals, privacy, phishing, and recovery

Original synthetic documentation for the TechStore Plus RAG project. Use these pages to test PDF ingestion, chunking, metadata, retrieval, and grounded customer-support answers.

1.1 Account Access and Identity Verification: Customer Evidence

For account support, security, and customer education teams, this section defines how TechStore Plus handles customer expectations when a content creator contacts support about a Wi-Fi 6 router and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a 4K monitor and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a USB-C docking station and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a noise-canceling headset and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
gaming notebook: router disconnects during video calls	Verify order, collect evidence, route via account workflow	06_techstore_account_security:1:1
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via account workflow	06_techstore_account_security:1:2
tablet: customer cannot locate package	Verify order, collect evidence, route via account workflow	06_techstore_account_security:1:3
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via account workflow	06_techstore_account_security:1:4

1.2 Account Access and Identity Verification: Agent Workflow

For account support, security, and customer education teams, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a 4K monitor and reports customer cannot locate package. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles escalation trigger when a engineering student contacts support about a USB-C docking station and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles exception handling when a competitive gamer contacts support about a noise-canceling headset and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a mechanical keyboard and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via account workflow	06_techstore_account_security:2:1
tablet: customer cannot locate package	Verify order, collect evidence, route via account workflow	06_techstore_account_security:2:2
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via account workflow	06_techstore_account_security:2:3
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via account workflow	06_techstore_account_security:2:4

1.3 Account Access and Identity Verification: Edge Case

For account support, security, and customer education teams, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a USB-C docking station and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles exception handling when a competitive gamer contacts support about a noise-canceling headset and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles source metadata when a content creator contacts support about a mechanical keyboard and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles quality audit note when a engineering student contacts support about a smart home hub and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
tablet: customer cannot locate package	Verify order, collect evidence, route via account workflow	06_techstore_account_security:3:1
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via account workflow	06_techstore_account_security:3:2
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via account workflow	06_techstore_account_security:3:3
4K monitor: payment authorization failed	Verify order, collect evidence, route via account workflow	06_techstore_account_security:3:4

1.4 Account Access and Identity Verification: Escalation Rule

For account support, security, and customer education teams, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a noise-canceling headset and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a mechanical keyboard and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles quality audit note when a engineering student contacts support about a smart home hub and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles eligibility when a hybrid office employee contacts support about a ultrabook laptop and reports router disconnects during video calls. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via account workflow	06_techstore_account_security:4:1
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via account workflow	06_techstore_account_security:4:2
4K monitor: payment authorization failed	Verify order, collect evidence, route via account workflow	06_techstore_account_security:4:3
USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via account workflow	06_techstore_account_security:4:4

2.1 Password, MFA, and Recovery Guidance: Quality Check

For account support, security, and customer education teams, this section defines how TechStore Plus handles customer expectations when a content creator contacts support about a gaming notebook and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a smartphone and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a tablet and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a mesh router and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
gaming notebook: router disconnects during video calls	Verify order, collect evidence, route via password, workflow	06_techstore_account_security:1:1
smartphone: screen flickers after sleep mode	Verify order, collect evidence, route via password, workflow	06_techstore_account_security:1:2
tablet: customer cannot locate package	Verify order, collect evidence, route via password, workflow	06_techstore_account_security:1:3
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via password, workflow	06_techstore_account_security:1:4

2.2 Password, MFA, and Recovery Guidance: Example Dialogue

For account support, security, and customer education teams, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a smartphone and reports customer cannot locate package. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 2-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles escalation trigger when a engineering student contacts support about a tablet and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 2-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles exception handling when a competitive gamer contacts support about a mesh router and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a Wi-Fi 6 router and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a smart home hub and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles quality audit note when a engineering student contacts support about a ultrabook laptop and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles eligibility when a hybrid office employee contacts support about a engineering workstation laptop and reports router disconnects during video calls. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via phishing, workflow	06_techstore_account_security:4:4

4.1 Payment Safety and Order Fraud Signals: Operational Metric

For account support, security, and customer education teams, this section defines how TechStore Plus handles customer expectations when a content creator contacts support about a tablet and reports screen flickers after sleep mode. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a mesh router and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a Wi-Fi 6 router and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a 4K monitor and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 1-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

4.2 Payment Safety and Order Fraud Signals: Baseline Standard

For account support, security, and customer education teams, this section defines how TechStore Plus handles agent next action when a field technician contacts support about a mesh router and reports customer cannot locate package. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 2-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles escalation trigger when a engineering student contacts support about a Wi-Fi 6 router and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 2-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles exception handling when a competitive gamer contacts support about a 4K monitor and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 2-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a USB-C docking station and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy.

Scenario marker 2-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

4.3 Payment Safety and Order Fraud Signals: Customer Evidence

For account support, security, and customer education teams, this section defines how TechStore Plus handles escalation trigger when a remote consultant contacts support about a Wi-Fi 6 router and reports order shows delivered but is missing. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles exception handling when a competitive gamer contacts support about a 4K monitor and reports payment authorization failed. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles source metadata when a content creator contacts support about a USB-C docking station and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles quality audit note when a engineering student contacts support about a noise-canceling headset and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Scenario marker 3-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles source metadata when a content creator contacts support about a mechanical keyboard and reports customer needs a replacement before travel. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles quality audit note when a engineering student contacts support about a smart home hub and reports battery drains quickly. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 3-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

Signal	Support action	RAG retrieval clue
tablet: customer cannot locate package	Verify order, collect evidence, route via customer workflow	06_techstore_account_security:3:1
mesh router: order shows delivered but is missing	Verify order, collect evidence, route via customer workflow	06_techstore_account_security:3:2
Wi-Fi 6 router: device will not power on	Verify order, collect evidence, route via customer workflow	06_techstore_account_security:3:3
4K monitor: payment authorization failed	Verify order, collect evidence, route via customer workflow	06_techstore_account_security:3:4

6.4 Customer Education Playbooks: Baseline Standard

For account support, security, and customer education teams, this section defines how TechStore Plus handles exception handling when a engineering student contacts support about a noise-canceling headset and reports device will not power on. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-1 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles source metadata when a hybrid office employee contacts support about a mechanical keyboard and reports warranty claim lacks serial number. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-2 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles quality audit note when a engineering student contacts support about a smart home hub and reports late delivery. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-3 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

For account support, security, and customer education teams, this section defines how TechStore Plus handles eligibility when a hybrid office employee contacts support about a ultrabook laptop and reports router disconnects during video calls. The agent should collect the minimum useful facts, confirm the customer's goal, and keep the answer grounded in the relevant policy or product record. If the case includes urgency, safety risk, a high-value shipment, repeated failure, or an unresolved warranty decision, the agent should identify the correct escalation path before promising a remedy. Scenario marker 4-4 is unique for retrieval testing and helps confirm that ChromaDB can recover this passage.

4K monitor: payment authorization failed	Verify order, collect evidence, route via customer workflow	06_techstore_account_security:4:3
USB-C docking station: warranty claim lacks serial number	Verify order, collect evidence, route via customer workflow	06_techstore_account_security:4:4

Appendix 25: Account Access and Identity Verification Scenario Library

Case study: A content creator purchased a engineering workstation laptop and contacted TechStore Plus because warranty claim lacks serial number. The agent first verified the order context, then separated what was known from what still needed evidence. The response avoided broad promises and explained the next checkpoint in plain language. This pattern supports retrieval because the case contains product, issue, evidence, and next-action signals in one passage.

Decision note for Account Access and Identity Verification: agents should choose the narrowest reliable answer. When a document does not contain a final remedy, the correct answer is to state the known policy boundary and request the missing evidence. This is especially important for warranty exclusions, delivery disputes, account recovery, and payment-risk cases.

Agent guidance: acknowledge the customer concern, name the relevant TechStore process, ask for the order number or serial number when needed, and summarize the next action. Do not invent coverage, shipping dates, repair outcomes, discounts, or security status. Use retrieved context as the source of truth and cite the source title when available.

Quality note: a strong answer for this topic is concise, specific, and verifiable. It should contain the policy window, customer evidence, product category, ownership team, and escalation threshold when those details are present. A weak answer repeats generic reassurance without connecting the customer request to a documented rule.
